MUHAMMAD ARIO BAGUS PRAKUSA

SOFTWARE ENGINEER

mariobgsp@gmail.com • linkedin.com/in/mariobgsp • github.com/mariobgsp • mariobgsp.github.io

SUMMARY

Backend engineer, 5+ years in Java, Spring and Go for banking and telecommunications – now also shipping agentic AI inside a regulated bank. At OCBC I run two tracks: core backend for the Hong Kong & Macau (HKMO) market, and agentic AI engineering on the Innovation team, where the MCP integrations and reusable agent skills I authored are adopted across teams. Measured results: an API request path from 20 seconds to 1.5 seconds, and a 1M-record batch job from 6 hours to 20 minutes.

EXPERIENCE

Software Engineer

OCBC Indonesia – BSD City, Greater Jakarta (On-site) | Oct 2024 – Present

- Dual mandate: core backend engineer on the HKMO (Hong Kong & Macau) squad, and agentic AI engineer on the Innovation team; delivery across ID, SG, MY and CHN markets in Agile/Scrum.
- Built agentic AI development workflows and integrated the Model Context Protocol (MCP), accelerating coding, debugging and automated tasks with architectural consistency.
- Authored reusable agent skills cutting documentation, coding and debugging from days to hours; presented "Superpowers" at a division town hall to engineering teams across the division.
- Reduced API processing time from 20 seconds to approximately 1.5 seconds by collapsing nested loop logic into a single-pass flow, eliminating the timeouts that occurred under concurrent calls.
- Created a reusable workflow for SOA migration that shortened the migration cycle.
- Designed scalable APIs and developed internal tools with technical architects to decouple legacy dependencies.
- Delivered production-ready services end to end – development through release – for a multi-country user base.

Software Engineer

PT. Bank CIMB Niaga – Tangerang Selatan (Hybrid) | Jan 2024 – Oct 2024

- Built backend microservices for the CCPL Octo Smart team in Java 17, Spring, MySQL and Git, applying clean-code practices.
- Reduced data processing time for 1 million records from 6 hours to approximately 20 minutes.

Software Engineer

PT. XL Axiata tbk. – Yogyakarta (Remote) | Nov 2021 – Dec 2023

- Built scalable microservices in Java 17, Spring, Go, Echo, Kubernetes, GCP, Solace, Oracle, PostgreSQL and Elasticsearch.
- Architected solutions to resolve pending payment delays and integrated secure APIs via API Gateway for the E-Payment/Oracle Exit teams.
- Ran knowledge-sharing sessions with Operations to keep production deployments seamless.

Java Programmer Bootcamp Trainee

PT. Xsis Mitra Utama – Yogyakarta (On-site) | Oct 2021 – Nov 2021

- Completed intensive OOP project-based bootcamp, building backend apps using Java, Spring, Docker, RabbitMQ, and Git.

EDUCATION

B.E., Engineering Physics – Universitas Gadjah Mada
Aug 2017 – July 2021
Thesis: Emotion Identification System via Thermal Camera (Python, AI)

SKILLS

Languages: Java, Go, Python **Frameworks & APIs:** Spring, Echo, REST, Microservices, SOA, API Gateway
AI & Agentic: Agentic AI development, Model Context Protocol (MCP), reusable agent skills, AI-augmented workflows, agent tooling design
Data & Messaging: MySQL, Oracle, PostgreSQL, Elasticsearch, Kafka, RabbitMQ, Solace
Cloud & DevOps: Docker, Kubernetes, GCP, Git
Practices: Agile/Scrum, SDLC, TDD, performance optimization, clean code

CERTIFICATIONS

- AI Engineer Agentic Track: The Complete Agent & MCP Course (2026)
- AI Engineer Core Track: LLM Engineering, RAG, QLoRA, Agents (2026)
- Software Architecture & Technology of Large-Scale Systems (2026)
