MUHAMMAD ARIO BAGUS PRAKUSA

SOFTWARE ENGINEER

mariobgsp@gmail.com • linkedin.com/in/mariobgsp • github.com/mariobgsp • mariobgsp.github.io

SUMMARY

Backend engineer with 5+ years designing and scaling microservices and high-performance APIs in Java, Spring, and Go across banking and telecommunications. Delivered measurable wins: cut API response time from 20 seconds to 1.5 seconds and reduced batch processing for 1 million records from 6 hours to 20 minutes. Now driving AI-augmented engineering on an innovation team – Agentic AI workflows, Model Context Protocol (MCP) integrations, and reusable agent skills adopted across teams.

EXPERIENCE

Software Engineer

OCBC Indonesia – BSD City, Greater Jakarta (On-site) | Oct 2024 – Present

- Drove core backend development for a platform serving ID, SG, MY, and CHN markets, partnering closely with front-end engineers in Agile/Scrum teams.
- Built Agentic AI Development workflows and integrated the Model Context Protocol (MCP) as part of the Innovation team, accelerating coding, debugging, and automated tasks with architectural consistency.
- Authored reusable agent skills that reduced documentation, coding, and debugging time from days to a few hours.
- Presented "Superpowers" AI skills at a division town hall, sharing agentic workflows with engineering teams across the division.
- Created a reusable workflow for SOA migration that shortened the migration cycle.
- Reduced API processing time from 20 seconds to approximately 1.5 seconds by refactoring the entire request logic into precise, non-blocking flows that no longer intermittently contend with one another.
- Designed scalable APIs and developed internal tools with technical architects to decouple legacy dependencies.
- Delivered production-ready services end to end – from development through release – for a multi-country user base.

Software Engineer

PT. Bank CIMB Niaga – Tangerang Selatan (Hybrid) | Jan 2024 – Oct 2024

- Developed robust backend microservices for the CCPL Octo Smart Team applying clean code practices with Java 17, Spring, MySQL, and Git.
- Optimized system performance, reducing data processing time for 1 million records from 6 hours to approximately 20 minutes.

Software Engineer

PT. XL Axiata tbk. – Yogyakarta (Remote) | Nov 2021 – Dec 2023

- Built scalable microservices using Java 17, Spring, Go, Echo, Kubernetes, GCP, Solace, Oracle, PostgreSQL, and Elasticsearch.
- Architected solutions to resolve pending payment delays and integrated secure APIs via API Gateway for E-Payment/Oracle Exit teams.
- Conducted knowledge-sharing sessions with Operations to ensure seamless production deployments.

Java Programmer Bootcamp Trainee

PT. Xsis Mitra Utama – Yogyakarta (On-site) | Oct 2021 – Nov 2021

- Completed intensive OOP project-based bootcamp, building backend apps using Java, Spring, Docker, RabbitMQ, and Git.

EDUCATION

B.E., Engineering Physics – Universitas Gadjah Mada
Aug 2017 – July 2021
Thesis: Emotion Identification System via Thermal Camera (Python, AI)

SKILLS

Languages: Java, Go, Python **Frameworks:** Spring, Echo, REST, Microservices, Clean Code
AI & Agentic: Agentic AI Development, Model Context Protocol (MCP), AI-Augmented Workflows
Databases: MySQL, Oracle, PostgreSQL, Elasticsearch
Cloud & DevOps: Docker, Kubernetes, GCP, Git, API Gateway, Solace, Kafka, RabbitMQ
Practices: Agile/Scrum, SDLC, TDD, Performance Optimization

CERTIFICATIONS

- AI Engineer Agentic Track: The Complete Agent & MCP Course (2026)
- AI Engineer Core Track: LLM Engineering, RAG, QLoRA, Agents (2026)
- Software Architecture & Technology of Large-Scale Systems (2026)
- React: Creating and Hosting a Full-Stack Site (2025)
- SOLID Principles: Introducing Software Architecture & Design (2025)
- Project Management Foundations (2025)
